ABOUT

I'm a software developer, but that's not all I am. I'm a problem solver, and I am excited to have found a career to utilize this skill daily. I stumbled across software development while reaching careers that would give me the opportunity to continuously learn and grow. I enjoy working in teams and interacting with all parts of a company to fully understand the business and products that I will be working on.

The Nashville Tech community welcoming and caring, is an environment that I have always looked forward to being part of. I am eager to contribute to the tech community in a positive way and jump-start my career as a software developer.

EDUCATION

NASHVILLE SOFTWARE SCHOOL
Jan 2020 - June 2020
Full-Stack Web Development

AUSTIN PEAY STATE UNIVERSITY
Jan 2018 - Nov 2019
Computer Science

SOFTWARE EXPERIENCE

Nashville Software School
Software Developer | Jan 2020 - Current
Intensive full-time 6 month software development program learning full-stack technologies through the creation of applications individually and in the group setting.
- Git and GitHub for version control
- Simulated work environment
- Working remotely on individual and team projects
- Created one page applications using diverse tech stacks including HTML5, CSS3, javaScript, and React.js, Bootstrap

PROJECTS

Scrappy
This application is similar to a scrapbook. A user can create, edit, and delete albums that they've made on their own, or with their friends. Users can store their photos in the albums that they have created. Repo: github.com/matthewbaker22/front-end-capstone
- Technologies used were: React, JavaScript, HTML5, CSS, Reactstrap, JSON server, and Cloudinary
  - Cloudinary was used to store the users photos
  - JSON server to save the links for cloudinary
  - React as a framework

Job Saver
This application lets users keep track of jobs that have caught their interest. The users are able to add jobs to specific columns, regarding the situations. The columns range from a wish list of jobs users may want, to offers they've gotten and rejected.
Repos: https://github.com/matthewbaker22/backend-capstone-front-end
        https://github.com/matthewbaker22/backend-capstone-back-end
- Technologies used were: React, Django, Reactstrap
  - Django w/ ORM for API
  - React for front end

WORK EXPERIENCE

Weiser Security Services Inc.
Security Officer | Dec 2018 - Current
- Ensure safety and overall well being of designated campus
- Help maintain the flow of cars and foot traffic, as well as public safety, during large events
- Primarily working alone, patrolling between multiple different campuses

Chick-fil-a
Team Leader | Aug 2016 - Dec 2018
- Helped setup daily schedule for employee positions
- Ensured that no employees or customers had any questions or needed assistance.
- Promoted to team leader from cashier, my responsibilities as a team leader included:
  - Answering store phone calls
  - Handling catering pickup and delivery
  - Counting registers at the end of shift
  - Managing a small team to ensure that work flow is staying fluid and efficient
